ALVIUM MIPI CSI-2 CAMERAS

Adapter Board for NVIDIA Jetson TX2 and AGX Xavier

User Guide
This document at a glance

Read this document carefully
Learn to use adapter boards in the most safe and efficient way and avoid damage to your embedded system.

Shipping contents
The delivery consists of the adapter board for NVIDIA Jetson TX2 and AGX Xavier Developer Kit with no other components.

Flexible printed circuit (FPC) cable is not included
The FPC cable to connect the adapter board to the camera is not included.

What else do you need?

Technical information and ordering of Allied Vision products
- For all information about Alvium CSI-2 cameras and accessories, see www.alliedvision.com/en/support/technical-documentation/alvium-csi-2-documentation.
- Please contact your Allied Vision Sales representative for ordering and for additional information on hardware options for Alvium cameras.

Conventions used in this user guide

To give this user guide an easily understood layout and to emphasize important information, the following typographical styles and symbols are used:

**Typographical styles**

<table>
<thead>
<tr>
<th>Style</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Emphasis</strong></td>
<td>Highlighting important things</td>
</tr>
<tr>
<td><strong>Web links and references</strong></td>
<td>Links to webpages and internal cross references</td>
</tr>
</tbody>
</table>

**Symbols and notes**

- **CAUTION**
  - **Risk of burns**
    - Precautions are described

- **NOTICE**
  - **Material damage**
    - Precautions are described.
Component naming

Components described in this user guide are not defined by common standards. Therefore, naming must be accurate to avoid misconceptions. Because naming is lengthy, reading is difficult. Simplified terms are used in this document.

Intended use

Allied Vision’s objective is the development, design, production, maintenance, servicing and distribution of digital cameras and components for image processing. We are offering standard products as well as customized solutions.

Intended use of Allied Vision product is the integration into Vision systems by professionals. All Allied Vision product is sold in a B2B setting.

Allied Vision isn’t a legal manufacturer of medical product. Instead, Allied Vision cameras and accessories may be used as components for medical product after design-in by the medical device manufacturer and based on a quality assurance agreement (QAA) between Allied Vision (supplier) and medical device manufacturer (customer). Allied Vision’s duties in that respect are defined by ISO 13485, clause 7.2 (customer-related processes, equivalent to ISO 9001, clause 8.2).

Copyright and trademarks

All text, pictures, and graphics are protected by copyright and other laws protecting intellectual property. All content is subject to change without notice. All trademarks, logos, and brands cited in this document are property and/or copyright material of their respective owners. Use of these trademarks, logos, and brands does not imply endorsement.

Copyright © 2021 Allied Vision Technologies GmbH. All rights reserved.
Your safety

This section informs about issues related to your personal safety. Descriptions explain how to avoid hazards and use adapter boards safely.

Handling hot adapter boards

Electrical components of adapter boards get hot during operation. Before operation, include adapter boards in housings that disable any contact to hot components.

Product safety

To prevent material damage, read the following to understand risks in using adapter boards.

Embedded systems

Setup and operation of Alvium CSI-2 cameras in embedded systems is different than for cameras in PC-based systems. Components can easily be damaged. If you are unfamiliar with embedded systems, be extremely careful. Follow the instructions in the Alvium CSI-2 Cameras User Guide.

Electrical connections

The MIPI CSI-2 standard does not specify electrical connections as extensively as the USB or GigE standard. Read specifications carefully. Alvium CSI-2 cameras are not protected against damage caused by reverse polarity.

Electrostatic discharge (ESD)

Electrostatic discharge (ESD) is dangerous for electronic devices, especially when tools or hands get in contact with connectors. We recommend measures to avoid damage by ESD:

- Unpacking: Remove the adapter board from its anti-static packaging only when your body is grounded.
- Workplace: Use a static-safe workplace with static-dissipative mat and air ionization.
- Wrist strap: Wear a static-dissipative wrist strap to ground your body.
- Clothing: Wear ESD-protective clothing. Keep components away from your body and clothing. Even if you are wearing a wrist strap, your body is grounded but your clothes are not.
• Housing: use an ESD protective housing, including the camera, embedded board, adapter board, and FPC cable.

Camera power

Operating cameras beyond the specified range damages cameras. Cameras are powered using the FPC connector at a maximum input of 5.5 VDC, using a limited power source (LPS), according to IEC62368-1: 2014 (Second Edition) with maximum 1.5 A per camera. Cameras are not intended to be connected to DC distribution networks.

We recommend you to power cameras with USB 2.0 Micro B power supplies providing 4.5 to 5.5 VDC at 1.5 A for one camera and 3.0 A for two cameras.

If you want to power the camera via the embedded board, note: Only Jetson TX2 boards enable to power cameras, Jetson Xavier boards do not.

FPC connectors

Hirose FH55-22S-0.5SH FPC connectors enable compact camera design. The small-sized connectors are sensitive to mechanical stress and are specified for maximum 20 mating and unmating cycles. Especially if you are inexperienced with this connector, be very cautious. If the FPC connector is broken, the complete device must be replaced. Follow the instructions in Using the adapter board on page 21 carefully.

• Avoid stress to FPC connectors.
• Allow only the FPC cable to touch conductors.

![Figure 1: Hirose FH55-22S-0.5SH FPC connector](image)

Additional information

For technical data and more instructions on the Hirose FH55-22S-0.5SH connector, see the manufacturer data sheet at [www.hirose.com](http://www.hirose.com).
Handling the actuator

- Move the actuator only between 0° (locked position) to 105° (open position).
- Carefully flip the actuator at the middle with your finger nail, see Connecting FPC cables to Hirose FPC connectors on page 22.

MIPI CSI-2 FPC cables

Manufacturing FPC cables or embedded boards

If you want to design your own components to connect Alvium CSI-2 cameras to embedded boards, contact your Allied Vision Sales representative or visit www.alliedvision.com/en/about-us/contact-us/technical-support-repair/-/rma.

FPC cable position

Short circuits of the FPC cable can damage the camera or connected hardware.
- Insert the FPC cable into the connector with cable guiding tabs matching the connector’s side guides. See Connecting FPC cables to Hirose FPC connectors on page 22.
- Connect the camera and the embedded board (adapter) only as shown by the arrow printed on the FPC cable, see Connecting FPC cables to Hirose FPC connectors on page 22.

FPC cables and stress

Over-stressed FPC cables can damage the camera and connected hardware. When camera and embedded board are twisted against each other or pulled apart from each other with too much force, the FPC cable is over-stressed. Spring contacts of FPC connectors are worn out, causing short circuits and unreliable electrical connections.
- Insert the FPC cable into the FPC connector at 12° to the PCB board surface. See Connecting FPC cables to Hirose FPC connectors on page 22.
- Allow only slight bending of the FPC cable (minimum bending radius: 10 mm).
- For strain relief, we recommend you to mount the embedded board, adapter board, and camera to a common base.

No hot-plugging for MIPI CSI-2

Alvium CSI-2 cameras do not support hot-plugging. Hot-plugging can destroy the camera and connected hardware by high inrush current.
- Disconnect power supplies before connecting FPC cables.

FPC cable signal quality

Noise and electromagnetic interference can disable camera functions.
- Avoid contact to metal surfaces, causing electromagnetic interference.
- Please use cables recommended by Allied Vision.
I/O connections

Through the adapter board, the camera connects to the embedded board. To reduce signal latencies, I/O cables can be connected directly to the adapter board. This includes soldering.

- Do soldering only if you have sufficient working knowledge.
- Follow the instructions in Connecting the I/Os on page 26.

Table 4: Adapter for Jetson TX2 and Xavier specifications

PCB and PCBA number

The PCB number is printed to the FPC connector side, the PCBA number is placed anywhere on the circuit board, for example, like this:

Figure 2: PCB and PCBA number on the adapter board
Dimensions and PCB layout

Figure 3: Adapter for Jetson TX2 and Xavier dimensions and PCB layout
To Jetson TX2 and Xavier

To Alvium cameras

Note: J1 to J4 are not equipped.

Figure 4: Adapter for Jetson TX2 and Xavier electronic schematics, part 1
VCC-EXT-IN: DCIN 4V5..5V5, max. 2 × 1.5 A

**Note:**
- J7 is not equipped.

**External power**

- Place a jumper on J8 to power Alvium cameras via Jetson TX2 boards.

- External USB power 

**TX2 power**

- J8

**Note:**
- Recommended to be used
- We recommend you to power Alvium cameras using the USB connector J9.
- If you want to use J8 to power Alvium cameras via Jetson TX2, ensure the embedded board's power supply provides sufficient current for the Jetson TX2 board and the connected camera(s).
- Do not use J8 for camera power with other embedded boards.

---

**NOTICE**

**Damage to the embedded board**

- Place a jumper on J8 to power Alvium cameras via Jetson TX2 boards.

- External USB power

---

**GPIO Levelshifter 1V8 <-> 3V3**

- I2C Levelshifter CAM

- I2C Levelshifter GPO

- GND <-> Chassis-GND

- Unused GPIO 1V8

Holes on NVIDIA carrier boards are connected to GND.

---

*Figure 5: Adapter for Jetson TX2 and Xavier electronic schematics, part 2*
Camera power

**NOTICE**

**Damage to power supplies**

If power supplies do not provide sufficient current, they may be damaged. Ensure USB power supplies provide 1.5 A for one camera and 3.0 A for two cameras.

Power Alvium cameras using the USB 2.0 Micro B receptacle (J9). See the description in Figure 5, Adapter for Jetson TX2 and Xavier electronic schematics, part 2 on page 19.

I/O connections

You can use the I/O lines to trigger the camera or to output a signal from the camera to trigger a device, such as a strobe light to control illumination. Through the adapter board, the camera connects to the embedded board:

<table>
<thead>
<tr>
<th>Camera</th>
<th>Camera line</th>

</tr>
<tr>
<td>Camera B</td>
<td>EXT-GPIO3-B</td>
<td>CAM1_MCLK03</td>
</tr>
</tbody>
</table>

*Table 5: I/O connections from the camera to the embedded board*

If you want to reduce signal latencies, such as for triggering the camera by a light barrier, you can connect I/O cables directly to the adapter board. Please see the instructions in Connecting the I/Os on page 26.
Using the adapter board

This chapter includes:

- Embedded system accessories ............................................. 22
- Connecting FPC cables to Hirose FPC connectors ................. 22
- Installing adapter boards ...................................................... 24
Embedded system accessories

**FPC cables**
For more information, see the Alvium Cameras Accessory Guide at www.alliedvision.com/en/support/technical-documentation/alviumcsi-2-documentation.

**Designing your own embedded components**
If you want to design your own components to connect Alvium CSI-2 cameras to embedded boards, contact your Allied Vision Sales representative or visit www.alliedvision.com/en/about-us/contact-us/technical-support-repair/-rma.

Proper usage of the Hirose FH55-22S-0.5SH FPC connector is vital for connecting Alvium CSI-2 cameras to embedded boards. Therefore, instructions start with usage of the FPC connector. Afterwards, setting up the adapter boards is described.

Connecting FPC cables to Hirose FPC connectors

Figure 6 shows how the FPC cable connects to the FPC connector. Follow the instructions to connect the FPC cable to the camera and to the embedded board.

**Figure 6: FPC cable and FPC connector (open position)**

1. Opening the FPC connector:
   With your fingernail*, flip the actuator to open position at 105° to the PCB surface, see Figure 7.

   *Or use a plastic tool, as metal tools can damage the actuator.

**Figure 7: Opening the FPC connector**
NOTICE

Damage to the camera by reverse polarity

If Alvium CSI-2 cameras are powered with reverse polarity, camera electronics is damaged.

- Before connecting camera power and I/O power, carefully read the Alvium Cameras User Guide for the FPC connector pin assignment.
- Connect the cable as shown in this section.

2. **Ensuring proper cable direction between host and camera**, take the FPC cable with conductors facing the FPC connector conductors (see Figure 9).

3. Inserting the FPC cable:
   At a horizontal angle of 90° to the connector’s rear (see Figure 9) and at a vertical angle of 12° to the PCB (see Figure 10), slowly insert the FPC cable into the actuator...

4. ...until cable guiding tabs are caught between connector rear and side guides (see Figure 9). Pull the cable slightly to ensure guiding tabs are properly engaged.

5. Holding the FPC cable in position, flap down the actuator to closed position (see Figure 10).
Installing adapter boards

CAUTION

Burns to the skin
Electrical components get hot during operation.

- Before operation, include adapter boards in housings that disable any contact to hot components.

NOTICE

Damage to electronics

- Disconnect all power supplies before installing the adapter board to your embedded board.
- Reconnect power only after installation is complete.
- Mount the embedded board, adapter board, and camera on a common base for strain relief.

NVIDIA Jetson Manuals

For details on NVIDIA Jetson Nano boards, including FFC connectors, see the manufacturer’s manual at www.nvidia.com/en-us/autonomous-machines/embedded-systems.

Connecting the embedded board

1. Connect the embedded board connector (a) of the adapter board to the camera connector of the embedded board.

Figure 11: Embedded board connector of the adapter board (bottom view)
Connecting the camera

FPC camera connector priority
The FPC camera connectors J5 and J6 have the same priority.

1. Following the instructions in Connecting FPC cables to Hirose FPC connectors on page 22, connect the FPC cable to one of the FPC camera connectors (b).
2. Connect the other end of the FPC cable to the camera.

Your Alvium CSI-2 camera is connected to the embedded board.

Connecting USB power
We recommend you to power the camera(s) using USB power.

NOTICE

Damage to power supplies
If power supplies do not provide sufficient current, they may be damaged.
Ensure USB power supplies provide 1.5 A for one camera and 3.0 A for two cameras.

1. Ensure the USB power supply is disconnected from the mains power.
2. Connect the power supply’s output connector to the USB 2.0 Micro B receptacle (c).

Your Alvium CSI-2 cameras can be operated via the embedded board.
Connecting the I/Os

If you want to use the I/O lines of the **embedded board**, see I/O connections on page 20. This way, you can use the I/Os immediately.

If you want to use the I/O lines of the **adapter board**, see the following instruction. This way, you reduce signal latencies, such as for triggering the camera by a light barrier.

**About this instruction**

This is a best-practice solution. Please visit [www.alliedvision.com/en/about-us/contact-us/technical-support-repair/-rma](http://www.alliedvision.com/en/about-us/contact-us/technical-support-repair/-rma) if you have any questions.

---

**NOTICE**

**Damage to the adapter board**

Improper soldering can cause copper pads to come loose from the PCB. To ensure soldering does not damage the adapter board:

- Keep soldering temperature low.
- Allow only short contact time between the soldering tip and the PCB.
- Use only minimal force to desolder the resistors.

---

**Camera A**

Camera A is connected to the embedded board by FPC connector J6 (f).

1. Desolder the resistors R2 (g) and R4 (h).
2. Solder a pin header (i) to J2.

---

*Figure 14: Desoldering resistors and soldering a pin header for Camera A*
3. On the pin header (i) on connector J2, use the I/O pins defined in I/O signal levels and description on page 29.

4. For connecting ground, continue with Connecting ground on page 28.

Camera B

Camera B is connected to the embedded board by FPC connector J5 (n).
1. Desolder the resistors R1 (k) and R3 (l).
2. Solder a pin header (m) to J1.
3. On the pin header (m) on connector J1, use the I/O pins defined in I/O signal levels and description on page 29.

![Figure 17: Connecting the I/Os for Camera B](image)

**Connecting ground**

4. Connect GND to pin 2 (o) of connector J7.

![Figure 18: Connecting GND](image)
I/O signal levels and description

Table 6 displays the signals for the GPIOs on connector J2, for GND on connector J4, and for VCC-EXT-IN on the USB connector J5.
