**Symbols and notes**

| NOTICE                      | Material damage                                    |
|                            | Precautions are described.                         |

| Practical tip              | Additional information helps to understand or ease handling the camera and components |

| Additional information     | Web link or reference to an external source with more information is shown. |
Component naming

Components described in this user guide are not defined by common standards. Therefore, naming must be accurate to avoid misconceptions. Because naming is lengthy, reading is difficult. Simplified terms are used in this document.

Compliance notifications

Intended use

Allied Vision’s objective is the development, design, production, maintenance, servicing and distribution of digital cameras and components for image processing. We are offering standard products as well as customized solutions.

Intended use of Allied Vision product is the integration into Vision systems by professionals. All Allied Vision product is sold in a B2B setting.

Allied Vision isn’t a legal manufacturer of medical product. Instead, Allied Vision cameras and accessories may be used as components for medical product after design-in by the medical device manufacturer and based on a quality assurance agreement (QAA) between Allied Vision (supplier) and medical device manufacturer (customer). Allied Vision’s duties in that respect are defined by ISO 13485, clause 7.2 (customer-related processes, equivalent to ISO 9001, clause 8.2).

Product safety

To prevent material damage, read the following to understand risks in using adapter boards.

Embedded systems

Setup and operation of Alvium CSI-2 cameras in embedded systems is different than for cameras in PC-based systems. Components can easily be damaged. If you are unfamiliar with embedded systems, be extremely careful. Follow the instructions in the Alvium CSI-2 Cameras User Guide.

Electrical connections

The MIPI CSI-2 standard does not specify electrical connections as extensively as USB or GigE standard. Read specifications carefully. Alvium CSI-2 cameras are not protected against damage caused by reverse polarity.
Electrostatic discharge (ESD)

Electrostatic discharge (ESD) is dangerous for electronic devices, especially when tools or hands get in contact with connectors. We recommend measures to avoid damage by ESD:

• Unpacking: Remove the adapter board from its anti-static packaging only when your body is grounded.
• Workplace: Use a static-safe workplace with static-dissipative mat and air ionization.
• Wrist strap: Wear a static-dissipative wrist strap to ground your body.
• Clothing: Wear ESD-protective clothing. Keep components away from your body and clothing. Even if you are wearing a wrist strap, your body is grounded but your clothes are not.
• Housing: use an ESD protective housing, including the camera, embedded board, adapter board, and FPC cable.

Camera power

Operating cameras beyond the specified range damages cameras. Cameras are powered using the FPC connector at a maximum input of 5.5 VDC, using a limited power source (LPS), according to IEC62368-1: 2014 (Second Edition) with maximum 1.5 A per camera. Cameras are not intended to be connected to DC distribution networks.

FPC connectors

Hirose FH55-22S-0.5SH FPC connectors enable compact camera design. The small-sized connectors are sensitive to mechanical stress and are specified for maximum 20 mating and unmating cycles. Especially if you are inexperienced with this connector, be very cautious. If the FPC connector is broken, the complete device must be replaced. Follow the instructions in Using adapter boards on page 24 carefully.

• Avoid stress to FPC connectors.
• Allow only the FPC cable to touch conductors.

Additional information

For technical data and more instructions on the Hirose FH55-22S-0.5SH connector, see the manufacturer data sheet at www.hirose.com.
Handling the actuator

- Move the actuator only between 0° (locked position) to 105° (open position).
- Carefully flip the actuator at the middle with your finger nail, see Connecting FPC cables to Hirose FPC connectors on page 25.

MIPI CSI-2 FPC cables

FPC cable position

Short circuits of the FPC cable can damage the camera or connected hardware.
- Insert the FPC cable into the connector with cable guiding tabs matching the connector’s side guides. See Connecting FPC cables to Hirose FPC connectors on page 25.
- Connect the camera and the embedded board (adapter) only as shown by the arrow printed on the FPC cable, see Connecting FPC cables to Hirose FPC connectors on page 25.

FPC cables and stress

Over-stressed FPC cables can damage the camera and connected hardware. When camera and embedded board are twisted against each other or pulled apart from each other with too much force, the FPC cable is over-stressed. Spring contacts of FPC connectors are worn out, causing short circuits and unreliable electrical connections.
- Insert the FPC cable into the FPC connector at 12° to the PCB board surface. See Connecting FPC cables to Hirose FPC connectors on page 25.
- Allow only slight bending of the FPC cable (minimum bending radius: 10 mm).
- For strain relief, fasten the FPC cable by a cable tie on both cable ends if possible.

No hot-plugging for MIPI CSI-2

Alvium CSI-2 cameras do not support hot-plugging. Hot-plugging can destroy camera and connected hardware by high inrush current.
- Disconnect power supplies before connecting FPC cables.

FPC cables signal quality

Noise and electromagnetic interference can disable camera functions.
- Avoid contact to metal surfaces, causing electromagnetic interference.
- Please use cables recommended by Allied Vision.

Embedded system accessories

**FPC cables**
For more information, see the Alvium Cameras Accessory Guide at www.alliedvision.com/en/support/technical-documentation/alvium-csi-2-documentation.

**Designing your own embedded components**
If you want to design your own components to connect Alvium CSI-2 cameras to embedded boards, contact your Allied Vision Sales representative or Allied Vision Support at support@alliedvision.com.

Proper usage of the Hirose FH55-22S-0.5SH FPC connector is vital for connecting Alvium CSI-2 cameras to embedded boards. Therefore, instructions start with usage of the FPC connector. Afterwards, setting up the adapter boards is described.

Connecting FPC cables to Hirose FPC connectors

*Figure 8 shows how the FPC cable connects to the FPC connector.*

Follow the instructions to connect the FPC cable to the camera and to the embedded board.

1. Opening the FPC connector:
With your fingernail*, flip the actuator to open position at 105° to the PCB surface, see *Figure 9.*

*Or use a plastic tool, as metal tools can damage the actuator.

*Figure 9: Opening the FPC connector*
**NOTICE**

**Damage to the camera by reverse polarity**

If Alvium CSI-2 cameras are powered with reverse polarity, camera electronics is damaged.

- Before connecting camera power and I/O power, carefully read the Alvium Cameras User Guide for the FPC connector pin assignment.
- Connect the cable as shown in this section.

---

2. **Ensuring proper cable direction between host and camera**, take the FPC cable with conductors facing the FPC connector conductors (see Figure 11).

3. Inserting the FPC cable:
   At a horizontal angle of 90° to the connector’s rear (see Figure 11) and at a vertical angle of 12° to the PCB (see Figure 12), slowly insert the FPC cable into the actuator...

4. ...until cable guiding tabs are caught between connector rear and side guides (see Figure 11). Pull the cable slightly to ensure guiding tabs are properly engaged.

5. Holding the FPC cable in position, flap down the actuator to closed position (see Figure 12).
Installing the adapter for Nitrogen6_MAX

**NOTICE**

**Damage to electronics**
- Disconnect all power supplies before installing the adapter board to your embedded board.
- Reconnect power only after installation is complete.

**Connecting the camera FPC cable**

1. Following the instructions in Connecting FPC cables to Hirose FPC connectors on page 25, connect the FPC cable (b) to the FPC connector (c) of the adapter board (a)...

   ...observe the cable direction: The printed word “host” must point to the FPC connector of the adapter board as shown in Figure 14.

2. Continue with Fastening the FPC cable with a cable tie on page 28.

   *Figure 13: Adapter board and FPC cable*

   *Figure 14: FPC cable being connected to the adapter board*
Fastening the FPC cable with a cable tie

**NOTICE**

**Damage to FPC connectors**

A bended FPC cable can break the FPC connector’s actuator. Fasten the FPC cable with a cable tie.

1. For strain relief, fasten the FPC cable to the adapter board with a cable tie (a).

2. Shorten the cable strap by cutting off the protruding end.

3. Continue with Connecting the embedded board on page 29.
Connecting the embedded board

Figure 17 shows how the adapter board is mounted to the Nitrogen6_MAX board:
After the MIPI CSI-2 connectors (g) of the adapter board and of the embedded board have been connected, the bolt (a) is fit through the washer (b) and the spacer sleeve (c) of the adapter board, through the mounting hole (d) of the embedded board, and another washer (e) and connected to the nut (f).

Figure 17: Mounting the adapter board overview
1. Connect the MIPI CSI-2 connector (g) of the adapter board and the MIPI CSI-2 connector (type J16) of the embedded board.

2. Fit the bolt (a) through the washer (b).

3. Push the bolt through the adapter board’s spacer sleeve (c) and through the embedded board’s mounting hole (d).

4. Continue with Tightening the mounting bolt on page 31.
Tightening the mounting bolt

1. Fit the washer (e) onto the bolt.
2. Fit the nut (f) onto the bolt and thread at 0.3 Nm maximum torque.

![Figure 20: Fitting the washer and nut onto the bolt](image)

3. Continue with Removing and inserting microSD cards on page 31.

Removing and inserting microSD cards

1. Push the microSD card slightly with your fingertip.
2. Continue with Setting power modes on page 32.

![Figure 21: Inserting the microSD card](image)
Setting power modes

1. Set jumper J1 to the corresponding position to select the power mode.

   For pin assignment, see Electronic schematics on page 18.

2. To finally connect the FPC cable to the camera, follow the instructions in Connecting FPC cables to Hirose FPC connectors on page 25.

![Figure 22: Setting the power mode](image)

Continue with Connecting the camera on page 32.

<table>

<td></td>
</tr>
</tbody>
</table>

*Table 10: Jumper position and power modes*

Connecting the camera

1. To finally connect the FPC cable to the camera, again follow the instructions in Connecting FPC cables to Hirose FPC connectors on page 25.

2. Provide strain relief to protect the FPC cable and the FPC connectors from damage and to avoid short circuits.

Your Alvium CSI-2 camera is connected to the embedded board.
Installing adapter boards for Wandboard i.MX6 Solo and Dual

**NOTICE**

**Damage to electronics**
- Disconnect all power supplies before installing the adapter board.
- Reconnect power only after installation is complete.

**Components in images**
Actual fastening material, such as bolts and spacers, may look different than components shown in the instruction images.

**Connecting the embedded board**

1. Remove the two front bolts (a) of the top board. Keep the bolts to be reused later.

   ![Figure 23: Removing top board bolts](image)

2. Following the instructions in Connecting FPC cables to Hirose FPC connectors on page 25, connect the FPC cable of the adapter board to FPC connector of the embedded board.

   ![Figure 24: Connecting the adapter board](image)

3. Continue with Mounting the adapter board on page 34.
Mounting the adapter board

1. Screw in the spacer bolts (a) through the spacer sleeves (b) at 1.2 Nm maximum torque.

![Figure 25: Screwing in the spacer bolts](image)

2. Fold the adapter board until the mounting holes of the adapter board (b) and the spacer bolt (c) match.

![Figure 26: Bringing the adapter board into position](image)

3. Screw in the two bolts (d) you removed before, at 1.2 Nm maximum torque.

4. For handling microSD cards, continue with Removing and inserting microSD cards on page 35.

   For connecting to the camera, continue with Connecting Wandboard i.MX6 series boards to the camera on page 41.

   For setting the power mode, continue with Setting power modes for Wandboard i.MX6 series on page 40.

![Figure 27: Tightening bolts for the adapter board](image)
Removing and inserting microSD cards

**NOTICE**

**Damage to the FPC cable or to the FPC connector**

Keep away from the FPC cable when you remove or insert SD cards.

Push the microSD card slightly with your fingertip.

*Figure 28: Pushing in the microSD card*

Components in images
Actual fastening material, such as bolts and spacers, may look different than components shown in the instruction images.

Removing the embedded board’s heat sink

1. Remove the four bolts (a) holding the heat sink (b). Keep the bolts to be reused later.

   ![Figure 29: Removing the heat sink bolts](image)

2. Remove the heat sink (b) and the four spacer sleeves (c). Keep the spacer sleeves to be reused later.

   ![Figure 30: Removing the heat sink and spacer sleeves](image)

3. Continue with Connecting the embedded board on page 37.
Connecting the embedded board

1. Following the instructions in Connecting FPC cables to Hirose FPC connectors on page 25, connect the CSI-2 FPC cable of the adapter board to CSI-2 FPC connector the embedded board.

2. Position the four spacers sleeves (a) that you removed before back into place.

3. Place the heat sink onto the spacers with mounting holes matching.

4. Screw in the two back bolts (b) of the heat sink at 1.2 Nm maximum torque.

5. Continue with Mounting the adapter board on page 38.
Mounting the adapter board

1. Screw in the spacer bolts (a) at 1.2 Nm maximum torque.

2. Fold the adapter board so that the mounting holes (b) of the adapter board and spacer bolts match.

3. Screw in the bolts (b) you removed before, at 1.2 Nm maximum torque.

4. For connecting to the camera, continue with Connecting Wandboard i.MX6 series boards to the camera on page 41.

For setting the power mode, continue with Setting power modes for Wandboard i.MX6 series on page 40.

Figure 35: Completing the adapter board mounting
Removing and inserting microSD cards

Push the microSD card slightly with your fingertip.

Figure 36: Pushing in the microSD card
Setting power modes for Wandboard i.MX6 series

Set jumper J3 to the corresponding position to select the power mode.

For pin assignment, see Electronic schematics on page 22.

Connecting Wandboard i.MX6 series boards to the camera

1. Following the instructions in Connecting FPC cables to Hirose FPC connectors on page 25, connect the FPC cable of the camera to FPC connector the embedded board.

2. To finally connect the FPC cable to the camera, again follow the instructions in Connecting FPC cables to Hirose FPC connectors on page 25.

3. Provide strain relief to protect the FPC cable and the FPC connectors from damage and to avoid short circuits.
